UniProt Comments for ARRDC4	Functions as an adapter recruiting ubiquitin-protein ligases to their specific substrates (). Plays a role in endocytosis of activated G protein-coupled receptors (GPCRs) (Probable). Through an ubiquitination-dependent mechanism plays also a role in the incorporation of SLC11A2 into extracellular vesicles (). May play a role in glucose uptake (PubMed:19605364).
Research Articles on ARRDC4	**1.** data highlight new function of ARRDC4 in innate immunity, contributing to the better understanding about regulation of MDA5 activation after EV71 infection, and also suggest ARRDC4 may serve as a potential target for intervention of EV71-induced inflammatory response.
