ADDITIONAL DETAILS

NCBI/Uniprot data below describe general gene information for aceK. It may not necessarily be applicable to this product.

NCBI GI #	499804335
NCBI Accession #	WP_011485069.1
UniProt Primary Accession #	Q124G2
GenBank Nucleotide #	WP_011485069.1
NCBI Official Full Name	bifunctional isocitrate dehydrogenase kinase/phosphatase
UniProt Protein Name	Isocitrate dehydrogenase kinase/phosphatase
Protein Family	Isocitrate dehydrogenase kinase/phosphatase
UniProt Gene Name	aceK

UniProt Synonym Gene Names	IDH kinase/phosphatase; IDHK/P
UniProt Comments for aceK	Bifunctional enzyme which can phosphorylate or dephosphorylate isocitrate dehydrogenase (IDH) on a specific serine residue. This is a regulatory mechanism which enables bacteria to bypass the Krebs cycle via the glyoxylate shunt in response to the source of carbon. When bacteria are grown on glucose, IDH is fully active and unphosphorylated, but when grown on acetate or ethanol, the activity of IDH declines drastically concomitant with its phosphorylation.
