ECMA-Ab ELISA Kit for Human

PRODUCT OVERVIEW

Product Name	ECMA-Ab, ELISA Kit
Full Product Name	Human ECMA-Ab ELISA Kit
Product Gene Name	ECMA-Ab elisa kit
Species Reactivity	Human
Assay Type	Sandwich
Samples	Serum, plasma, cell culture supernate and other biological fluids
Detection Range	50 pg/ml-800 pg/ml
Sensitivity	1 pg/ml
Production Time	Due to severe delay and raw materials shortage, production time may takes between 5-8 weeks.
Related Product Information for ECMA-Ab elisa kit	Intended Use: The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration ofECMA-ABin the sample, This ECMA-ABELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versusECMA-ABconcentration. The concentration ofECMA-ABin the samples is then determined by comparing the O.D. of the samples to the standard curve.
Other Notes	Small volumes of ECMA-Ab elisa kit vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
Searchable Terms for ECMA-Ab purchase	MBS3802085 is a ready-to-use microwell, strip plate ELISA (enzyme-linked immunosorbent assay) Kit for analyzing the presence of the ECMA-Ab, ELISA Kit target analytes in biological samples. The concentration gradients of the kit standards or positive controls render a theoretical kit detection range in biological research samples containing ECMA-Ab. The ELISA analytical biochemical technique of the MBS3802085 kit is based on ECMA-Ab antibody-ECMA-Ab antigen interactions (immunosorbency) and an HRP colorimetric detection system to detect ECMA-Ab antigen targets in samples. The ELISA Kit is designed to detect native, not recombinant, ECMA-Ab. Appropriate sample types may include undiluted body fluids and/or tissue homogenates, secretions. Quality control assays assessing reproducibility identified the intra-assay CV (%) and inter-assay CV(%).

Typical Testing Data/Standard Curve (for reference only) of ECMA-Ab elisa kit

For Research Use Only. Not for use in diagnostic or therapeutic procedures.
