Getah Virus ELISA Kit for Human

PRODUCT OVERVIEW

Product Name	Getah Virus, ELISA Kit
Full Product Name	Human Getah Virus Antibody ELISA Kit
Species Reactivity	Human
Inter-assay Precision	Inter-assay CV is less than 15%.
Intra-assay Precision	Intra-assay CV is less than 15%.
Production Time	Due to severe delay and raw materials shortage, production time may takes between 5-8 weeks.
Related Product Information for Getah Virus elisa kit	Intended Uses: This Getah virus antibody ELISA kit is intended Laboratory for Research use only!. In order to determine whether contains Getah virus antibody in the sample, this Getah virus antibody ELISA Kit includes Negative control and Positive control. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. The color depth was positively correlated with the Getah virus antibody in the sample.
Other Notes	Small volumes of Getah Virus elisa kit vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
Searchable Terms for Getah Virus purchase	MBS3803002 is a ready-to-use microwell, strip plate ELISA (enzyme-linked immunosorbent assay) Kit for analyzing the presence of the Getah Virus, ELISA Kit target analytes in biological samples. The concentration gradients of the kit standards or positive controls render a theoretical kit detection range in biological research samples containing Getah Virus. The ELISA analytical biochemical technique of the MBS3803002 kit is based on Getah Virus antibody-Getah Virus antigen interactions (immunosorbency) and an HRP colorimetric detection system to detect Getah Virus antigen targets in samples. The ELISA Kit is designed to detect native, not recombinant, Getah Virus. Appropriate sample types may include undiluted body fluids and/or tissue homogenates, secretions. Quality control assays assessing reproducibility identified the intra-assay CV (%) and inter-assay CV(%).

For Research Use Only. Not for use in diagnostic or therapeutic procedures.
