Insulin Beta Chain Peptide Peptide – (15-23) Synthetic Peptide

PRODUCT OVERVIEW

Product Name	Insulin beta Chain, Peptide
Full Product Name	Insulin beta Chain Peptide (15-23)
Sequence	Leu-Tyr-Le u-Val-Cys- Gly-Glu-Ar g-Gly S equence Shortening : LYLVCGERG
Molecular Weight	1009.18
CAS Number	247044-67-3
Formula	C44H72N12O13S
Related Product Information for Insulin beta Chain peptide	Insulin beta Chain Peptide (15-23), also known as INS, is an insulin-derived peptide recognized by islet-associated T cells. The Insulin beta Chain Peptide (15-23) tetramer stained the INS-reactive CTL clone G9C8, but neither this tetramer nor the negative control tetramer (TUM) stained the splenic CD8+ T cells from NOD or 8.3-TCR-transgenic NOD mice.
Other Notes	Small volumes of Insulin beta Chain peptide vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
Searchable Terms for Insulin beta Chain purchase	MBS3848048 is a peptide targeting Insulin beta Chain. Also known as Insulin beta Chain Peptide (15-23).

Structure of Insulin beta Chain peptide

For Research Use Only. Not for use in diagnostic or therapeutic procedures.
