Related Product Information for anti-NFkB antibody	Nuclear factor B (NF-B) encompasses an important family of inducible transcriptional activators that regulate a wide variety of cellular and viral genes. The family members include p50, p52, p65 (RelA), c-Rel, and RelB. The p65 subunit, similar to two others in the B family, RelB and c-Rel, contains two transactivation domains in the C-terminal region of the protein.
Other Notes	Small volumes of anti-NFkB antibody vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
