NCBI Summary for TIM-1	The protein encoded by this gene is a membrane receptor for both human hepatitis A virus (HHAV) and TIMD4. The encoded protein may be involved in the moderation of asthma and allergic diseases. The reference genome represents an allele that retains a MTTVP amino acid segment that confers protection against atopy in HHAV seropositive individuals. Three transcript variants encoding the same protein have been found for this gene. [provided by RefSeq, Mar 2010]
UniProt Comments for TIM-1	TIM-1: May play a role in T-helper cell development and the regulation of asthma and allergic diseases. Receptor for TIMD4. In case of human hepatitis A virus (HHAV) infection, functions as a cell-surface receptor for the virus. May play a role in kidney injury and repair. Belongs to the immunoglobulin superfamily. TIM family. Protein type: Membrane protein, integral Chromosomal Location of Human Ortholog: 5q33.2 Cellular Component: integral to membrane Molecular Function: viral receptor activity Biological Process: entry of virus into host cell Disease: Ige Responsiveness, Atopic
