UniProt Comments for CNPY3	TNRC5: Toll-like receptor (TLR)-specific co-chaperone for HSP90B1. Required for proper TLR folding, except that of TLR3, and hence controls TLR exit from the endoplasmic reticulum. Consequently, required for both innate and adaptative immune responses. Belongs to the canopy family. 2 isoforms of the human protein are produced by alternative splicing. Protein type: Secreted, signal peptide; Secreted Chromosomal Location of Human Ortholog: 6p21.1 Cellular Component: endoplasmic reticulum lumen Molecular Function: receptor binding Biological Process: toll-like receptor signaling pathway; innate immune response
