UniProt Comments for TAAR9	TAAR9: Orphan receptor. Could be a receptor for trace amines. Trace amines are biogenic amines present in very low levels in mammalian tissues. Although some trace amines have clearly defined roles as neurotransmitters in invertebrates, the extent to which they function as true neurotransmitters in vertebrates has remained speculative. Trace amines are likely to be involved in a variety of physiological functions that have yet to be fully understood. Belongs to the G-protein coupled receptor 1 family. Protein type: Membrane protein, multi-pass; GPCR, family 1; Membrane protein, integral; Receptor, GPCR Chromosomal Location of Human Ortholog: 6q23.2 Cellular Component: plasma membrane; integral to membrane Molecular Function: G-protein coupled receptor activity; trace-amine receptor activity Biological Process: G-protein coupled receptor protein signaling pathway
