NCBI Official Full Name	Homo sapiens sorting nexin 11, mRNA
NCBI Official Synonym Full Names	sorting nexin 11
NCBI Official Symbol	SNX11
Protein Family	Sorting nexin
NCBI Protein Information	sorting nexin-11
NCBI Summary for SNX11	This gene encodes a member of the sorting nexin family. Members of this family contain a phox (PX) domain, which is a phosphoinositide binding domain, and are involved in intracellular trafficking. This protein does not contain a coiled coil region, like some family members. This gene encodes a protein of unknown function. This gene results in two transcript variants differing in the 5' UTR, but encoding the same protein. [provided by RefSeq, Jul 2008]
