11-Deoxycortisol ELISA Kit for Chicken

PRODUCT OVERVIEW

Product Name	11-Deoxycortisol, ELISA Kit
Full Product Name	Chicken 11-Deoxycortisol ELISA Kit
Species Reactivity	Chicken
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	0.1 nmol/L
Specificity	This assay has high sensitivity and excellent specificity for detection of 11D-CORT. No significant cross-reactivity or interference between 11D-CORT and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between 11D-CORT and all the analogues, therefore, cross reaction may still exist in some cases.
Preparation and Storage	Store all reagents at 2-8 degree C.
Sample Preparation	We suggest pre-experimenting with neat (undiluted) samples, 1:2 or 1:4 dilutions. Please avoid diluting your samples more than 1:10 as it would exceed the dilution limit set for this kit. If the expected concentration of the target is beyond the detection range of the kit, please contact our technical support team
ISO Certification	Manufactured in an ISO 13485:2016 Certified Laboratory.
Related Product Information for 11-Deoxycortisol elisa kit	Intended Uses: This 11D-CORT ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Chicken 11D-CORT. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: 11D-CORT ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-11D-CORT antibody and an 11D-CORT-HRP conjugate. The assay sample and buffer are incubated together with 11D-CORT-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the 11D-CORT concentration since 11D-CORT from samples and 11D-CORT-HRP conjugate compete for the anti-11D-CORT antibody binding site. Since the number of sites is limited, as more sites are occupied by 11D-CORT from the sample, fewer sites are left to bind 11D-CORT-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The 11D-CORT concentration in each sample is interpolated from this standard curve.
Other Notes	Small volumes of 11-Deoxycortisol elisa kit vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
Searchable Terms for 11-Deoxycortisol purchase	MBS7225149 is a ready-to-use microwell, strip plate ELISA (enzyme-linked immunosorbent assay) Kit for analyzing the presence of the 11-Deoxycortisol, ELISA Kit target analytes in biological samples. The concentration gradients of the kit standards or positive controls render a theoretical kit detection range in biological research samples containing 11-Deoxycortisol. The ELISA analytical biochemical technique of the MBS7225149 kit is based on 11-Deoxycortisol antibody-11-Deoxycortisol antigen interactions (immunosorbency) and an HRP colorimetric detection system to detect 11-Deoxycortisol antigen targets in samples. The ELISA Kit is designed to detect native, not recombinant, 11-Deoxycortisol. Appropriate sample types may include undiluted body fluids and/or tissue homogenates, secretions. Quality control assays assessing reproducibility identified the intra-assay CV (%) and inter-assay CV(%).

Typical Testing Data/Standard Curve (for reference only) of 11-Deoxycortisol elisa kit

For Research Use Only. Not for use in diagnostic or therapeutic procedures.
