Cu(2+)-Transporting Atpase ELISA Kit for Chicken

PRODUCT OVERVIEW

Product Name	Cu(2+)-transporting ATPase, ELISA Kit
Full Product Name	Chicken Cu(2+)-transporting ATPase ELISA Kit
Species Reactivity	Chicken
Preparation and Storage	Store all reagents at 2-8 degree C.
Sample Preparation	We suggest pre-experimenting with neat (undiluted) samples, 1:2 or 1:4 dilutions. Please avoid diluting your samples more than 1:10 as it would exceed the dilution limit set for this kit. If the expected concentration of the target is beyond the detection range of the kit, please contact our technical support team
Cross Reaction	No significant cross-reactivity or interference between this antigen and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection, therefore, cross reaction may still exist in some cases.
ISO Certification	Manufactured in an ISO 13485:2016 Certified Laboratory.
Applications Tested/Suitable for Cu(2+)-transporting ATPase elisa kit	ELISA (EIA)
Related Product Information for Cu(2+)-transporting ATPase elisa kit	MBS7275212 is a ready-to-use microwell, strip plate ELISA (enzyme-linked immunosorbent assay) Kit for analyzing the presence of the Cu(2+)-transporting ATPase, ELISA Kit target analytes in biological samples. The concentration gradients of the kit standards or positive controls render a theoretical kit detection range in biological research samples containing Cu(2+)-transporting ATPase. The ELISA analytical biochemical technique of the MBS7275212 kit is based on Cu(2+)-transporting ATPase antibody-Cu(2+)-transporting ATPase antigen interactions (immunosorbency) and an HRP colorimetric detection system to detect Cu(2+)-transporting ATPase antigen targets in samples. The ELISA Kit is designed to detect native, not recombinant, Cu(2+)-transporting ATPase. Appropriate sample types may include undiluted body fluids and/or tissue homogenates, secretions. Quality control assays assessing reproducibility identified the intra-assay CV (%) and inter-assay CV(%).
Other Notes	Small volumes of Cu(2+)-transporting ATPase elisa kit vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.

ADDITIONAL DETAILS

NCBI/Uniprot data below describe general gene information for Cu(2+)-transporting ATPase. It may not necessarily be applicable to this product.

Protein Family	Copper-transporting ATPase

Product Note	Select online data sheet information is drawn from bioinformatics databases, occasionally resulting in ambiguous or non-relevant product information. It is the responsibility of the customer to review, verify, and evaluate the information to make sure it matches their requirements before purchasing the kit. Our ELISA Kit assays are dynamic research tools and sometimes they may be updated and improved. If the format of this assay is important to you then please request the current manual or contact our technical support team with a presales inquiry before placing an order. We will confirm the current details of the assay. We cannot guarantee the sample manual posted online is the most current manual, it is intended to serve as an example only. Please refer to the instructions For Use provided with the assay kit for precise details.
