Related Product Information for Salusin B elisa kit	MBS728811 is a ready-to-use microwell, strip plate ELISA (enzyme-linked immunosorbent assay) Kit for analyzing the presence of the Salusin beta, ELISA Kit target analytes in biological samples. The concentration gradients of the kit standards or positive controls render a theoretical kit detection range in biological research samples containing Salusin B. The ELISA analytical biochemical technique of the MBS728811 kit is based on Salusin B antibody-Salusin B antigen interactions (immunosorbency) and an HRP colorimetric detection system to detect Salusin B antigen targets in samples. The ELISA Kit is designed to detect native, not recombinant, Salusin B. Appropriate sample types may include undiluted body fluids and/or tissue homogenates, secretions. Quality control assays assessing reproducibility identified the intra-assay CV (%) and inter-assay CV(%).
Other Notes	Small volumes of Salusin B elisa kit vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
