Related Product Information for CKLFSF6 elisa kit	Principle of the Assay||This kit was based on sandwich enzyme-linked immune-sorbent assay technology. anti-Human CKLFSF6 antibody was pre-coated onto 96-well plates. And the biotin conjugated anti-Human CKLFSF6 antibody was used as detection antibodies. The standards, test samples and biotin conjugated detection antibody were added to the wells subsequently, and wash with wash buffer. HRP-Streptavidin was added and unbound conjugates were washed away with wash buffer. TMB substrates were used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a blue color product that changed into yellow after adding acidic stop solution. The density of yellow is proportional to the Human CKLFSF6 amount of sample captured in plate. Read the O.D. absorbance at 450nm in a microplate reader, and then the concentration of Human CKLFSF6 can be calculated.
Other Notes	Small volumes of CKLFSF6 elisa kit vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
Searchable Terms for CKLFSF6 purchase	MBS763579 is a ready-to-use microwell, strip plate ELISA (enzyme-linked immunosorbent assay) Kit for analyzing the presence of the Chemokine Like Factor Superfamily 6 (CKLFSF6) ELISA Kit target analytes in biological samples. The concentration gradients of the kit standards or positive controls render a theoretical kit detection range in biological research samples containing CKLFSF6. The ELISA analytical biochemical technique of the MBS763579 kit is based on CKLFSF6 antibody-CKLFSF6 antigen interactions (immunosorbency) and an HRP colorimetric detection system to detect CKLFSF6 antigen targets in samples. The ELISA Kit is designed to detect native, not recombinant, CKLFSF6. Appropriate sample types may include undiluted body fluids and/or tissue homogenates, secretions. Quality control assays assessing reproducibility identified the intra-assay CV (%) and inter-assay CV(%).
