Nt-4 ELISA Kit for Rat

PRODUCT OVERVIEW

Product Name	NT-4, ELISA Kit
Full Product Name	Rat NT-4 ELISA Kit
Product Gene Name	NT-4 elisa kit
Species Reactivity	Rat
Detection Range	31.25-2000pg/mL
Sensitivity	18.75pg/mL
Preparation and Storage	An unopened kit can be stored at 2-8 degree C for 1 month unless otherwise specified in the kit documetation. If the kit is not supposed to be used within 1 month, store the components separately upon receipt according to the directions accompanying the kit.
Detection Target	NT-4
Related Product Information for NT-4 elisa kit	Rat NT-4 ELISA Kit is a highly sensitive sandwich enzyme-linked immunoassay (ELISA) for measuring NT-4 in serum, plasma and other biological fluids. Reagents for up to 96 tests. This ELISA Kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this Kit has been pre-coated with an antibody specific to Rat NT-4. Samples (or Standards) are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Rat NT-4 and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Rat NT-4, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 +/- 2 nm. The OD value is proportional to the concentration of Rat NT-4. You can calculate the concentration of Rat NT-4 in the samples by comparing the OD of the samples to the standard curve.
Other Notes	Small volumes of NT-4 elisa kit vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
Searchable Terms for NT-4 purchase	MBS8427574 is a ready-to-use microwell, strip-or-full plate ELISA (enzyme-linked immunosorbent assay) Kit for analyzing the presence of the NT-4, ELISA Kit target analytes in biological samples. The concentration gradients of the kit standards or positive controls render a theoretical kit detection range in biological research samples containing NT-4. The ELISA analytical biochemical technique of the MBS8427574 kit is based on NT-4 antibody-NT-4 antigen interactions (immunosorbency) and an HRP colorimetric detection system to detect NT-4 antigen targets in samples. The ELISA Kit is designed to detect native, not recombinant, NT-4. Appropriate sample types may include undiluted body fluids and/or tissue homogenates, secretions. Quality control assays assessing reproducibility identified the intra-assay CV (%) and inter-assay CV(%).

For Research Use Only. Not for use in diagnostic or therapeutic procedures.
