FGF2 Antibody – Rabbit Polyclonal

PRODUCT OVERVIEW

Product Name	FGF2, Polyclonal Antibody
Full Product Name	FGF2 Rabbit pAb
Product Gene Name	anti-FGF2 antibody
Product Synonym Names	Fibroblast growth factor 2; FGF-2; Basic fibroblast growth factor; bFGF; Heparin-binding growth factor 2; HBGF-2; FGF2; FGFB
Clonality	Polyclonal
Isotype	Ig
Host	Rabbit
Species Reactivity	Human
Form/Format	In PBS supplemented with 0.09% (W/V) Sodium Azide.
Purity/Purification	Affinity Purified
OMIM	134920
3D Structure	ModBase 3D Structure for P09038
Immunogen	This FGF2 antibody is generated from a rabbit immunized with a recombinant protein.
Cellular Localization	Nucleus, Secreted
ISO Certification	Manufactured in an ISO 9001:2015 Certified Laboratory.
Applications Tested/Suitable for anti-FGF2 antibody	Western Blot (WB)
Application Notes for anti-FGF2 antibody	WB: 1:2000
Related Product Information for anti-FGF2 antibody	MBS8557134 is an antibody targeting FGF2. Also known as FGF2 Rabbit pAb. Reactive in Human. Host: Rabbit.
Other Notes	Small volumes of anti-FGF2 antibody vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.

ADDITIONAL DETAILS

NCBI/Uniprot data below describe general gene information for FGF2. It may not necessarily be applicable to this product.

NCBI GI #	56068041
NCBI GeneID	2247
NCBI Accession #	AAV70487.1
UniProt Primary Accession #	P09038
UniProt Related Accession #	P09038
NCBI Official Full Name	basic fibroblast growth factor, partial

NCBI Official Synonym Full Names	fibroblast growth factor 2
NCBI Official Symbol	FGF2
NCBI Official Synonym Symbols	BFGF; FGFB; FGF-2; HBGF-2
UniProt Protein Name	Fibroblast growth factor 2
UniProt Synonym Protein Names	Basic fibroblast growth factor; bFGF; Heparin-binding growth factor 2
Protein Family	Fibroblast growth factor
UniProt Gene Name	FGF2
UniProt Synonym Gene Names	FGFB; FGF-2; bFGF; HBGF-2
UniProt Entry Name	FGF2_HUMAN
NCBI Protein Information	fibroblast growth factor 2
NCBI Summary for FGF2	The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members bind heparin and possess broad mitogenic and angiogenic activities. This protein has been implicated in diverse biological processes, such as limb and nervous system development, wound healing, and tumor growth. The mRNA for this gene contains multiple polyadenylation sites, and is alternatively translated from non-AUG (CUG) and AUG initiation codons, resulting in five different isoforms with distinct properties. The CUG-initiated isoforms are localized in the nucleus and are responsible for the intracrine effect, whereas, the AUG-initiated form is mostly cytosolic and is responsible for the paracrine and autocrine effects of this FGF. [provided by RefSeq, Jul 2008]
UniProt Comments for FGF2	FGF2: Plays an important role in the regulation of cell survival, cell division, angiogenesis, cell differentiation and cell migration. Functions as potent mitogen in vitro. Monomer. Homodimer. Interacts with FGFR1, FGFR2, FGFR3 and FGFR4. Affinity between fibroblast growth factors (FGFs) and their receptors is increased by heparan sulfate glycosaminoglycans that function as coreceptors. Interacts with CSPG4, FGFBP1 and TEC. Found in a complex with FGFBP1, FGF1 and FGF2. Expressed in granulosa and cumulus cells. Expressed in hepatocellular carcinoma cells, but not in non- cancerous liver tissue. Belongs to the heparin-binding growth factors family. 4 isoforms of the human protein are produced by alternative initiation. Protein type: Activator; Motility/polarity/chemotaxis Chromosomal Location of Human Ortholog: 4q26 Cellular Component: extracellular space; extracellular region; nucleus Molecular Function: heparin binding; protein binding; growth factor activity; ligand-dependent nuclear receptor transcription coactivator activity; cytokine activity; chemoattractant activity; fibroblast growth factor receptor binding Biological Process: extracellular matrix organization and biogenesis; wound healing; nerve growth factor receptor signaling pathway; somatic stem cell maintenance; activation of MAPK activity; positive regulation of transcription, DNA-dependent; signal transduction; chemotaxis; hyaluronan catabolic process; growth factor dependent regulation of satellite cell proliferation; positive regulation of MAP kinase activity; positive chemotaxis; positive regulation of cell proliferation; embryonic morphogenesis; positive regulation of cardiac muscle cell proliferation; epidermal growth factor receptor signaling pathway; nervous system development; phosphoinositide-mediated signaling; fibroblast growth factor receptor signaling pathway; positive regulation of cell fate specification; positive regulation of blood vessel endothelial cell migration; positive regulation of phosphoinositide 3-kinase activity; negative regulation of blood vessel endothelial cell migration; regulation of angiogenesis; organ morphogenesis; positive regulation of angiogenesis; cell migration during sprouting angiogenesis; ureteric bud branching; positive regulation of cell division; release of sequestered calcium ion into cytosol; Ras protein signal transduction; insulin receptor signaling pathway; phosphatidylinositol biosynthetic process; innate immune response; positive regulation of transcription from RNA polymerase II promoter; positive regulation of endothelial cell proliferation; inositol phosphate biosynthetic process
Research Articles on FGF2	**1.** FGF2/FGFR1 signaling is a potential mechanistic link in visceral adipose tissue-stimulated transformation of breast epithelial cells

Precautions	All of MyBioSource's Products are for scientific laboratory research purposes and are not for diagnostic, therapeutics, prophylactic or in vivo use. Through your purchase, you expressly represent and warrant to MyBioSource that you will properly test and use any Products purchased from MyBioSource in accordance with industry standards. MyBioSource and its authorized distributors reserve the right to refuse to process any order where we reasonably believe that the intended use will fall outside of our acceptable guidelines.
Disclaimer	While every efforts were made to ensure the accuracy of the information provided in this datasheet, MyBioSource will not be liable for any omissions or errors contained herein. MyBioSource reserves the right to make changes to this datasheet at any time without prior notice. It is the responsibility of the customer to report product performance issues to MyBioSource within 30 days of receipt of the product. Please visit our Terms & Conditions page for more information.
Product Note	Select online data sheet information is drawn from bioinformatics databases, occasionally resulting in ambiguous or non-relevant product information. It is the responsibility of the customer to review, verify, and evaluate the information to make sure it matches their requirements before purchasing the kit. Our ELISA Kit assays are dynamic research tools and sometimes they may be updated and improved. If the format of this assay is important to you then please request the current manual or contact our technical support team with a presales inquiry before placing an order. We will confirm the current details of the assay. We cannot guarantee the sample manual posted online is the most current manual, it is intended to serve as an example only. Please refer to the instructions For Use provided with the assay kit for precise details.

For Research Use Only. Not for use in diagnostic or therapeutic procedures.
