Related Product Information for EOMES elisa kit	Principle of the Assay: The test principle applied in this kit is Sandwich enzyme immunoassay. The microtiter plate provided in this kit has been pre-coated with an antibody specific to Eomesodermin(EOMES). Standards or samples are added to the appropriate microtiter plate wells then with a biotin-conjugated antibody specific to Eomesodermin(EOMES). Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain Eomesodermin(EOMES), biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of Eomesodermin(EOMES) in the samples is then determined by comparing the OD of the samples to the standard curve.
Other Notes	Small volumes of EOMES elisa kit vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
Searchable Terms for EOMES purchase	MBS8803196 is a ready-to-use microwell, strip plate ELISA (enzyme-linked immunosorbent assay) Kit for analyzing the presence of the EOMES (Eomesodermin) ELISA Kit target analytes in biological samples. The concentration gradients of the kit standards or positive controls render a theoretical kit detection range in biological research samples containing EOMES. The ELISA analytical biochemical technique of the MBS8803196 kit is based on EOMES antibody-EOMES antigen interactions (immunosorbency) and an HRP colorimetric detection system to detect EOMES antigen targets in samples. The ELISA Kit is designed to detect native, not recombinant, EOMES. Appropriate sample types may include undiluted body fluids and/or tissue homogenates, secretions. Quality control assays assessing reproducibility identified the intra-assay CV (%) and inter-assay CV(%).
