NCBI Summary for RPAP1	This protein forms part of the RNA polymerase II (RNAPII) enzyme complex and may recruit RNAPII to chromatin through its interaction with acetylated histones. [provided by RefSeq, Jul 2012]

UniProt Comments for RPAP1	RPAP1: Forms an interface between the RNA polymerase II enzyme and chaperone/scaffolding protein, suggesting that it is required to connect RNA polymerase II to regulators of protein complex formation. Required for interaction of the RNA polymerase II complex with acetylated histone H3. Belongs to the RPAP1 family. 3 isoforms of the human protein are produced by alternative splicing. Chromosomal Location of Human Ortholog: 15q15.1 Cellular Component: nucleus Molecular Function: DNA binding; DNA-directed RNA polymerase activity Biological Process: transcription from RNA polymerase II promoter
