Related Product Information for FDFT1 elisa kit	MBS9360743 is a ready-to-use microwell, strip-or-full plate ELISA (enzyme-linked immunosorbent assay) Kit for analyzing the presence of the Squalene Synthase (FDFT1) ELISA Kit target analytes in biological samples. The concentration gradients of the kit standards or positive controls render a theoretical kit detection range in biological research samples containing FDFT1. The ELISA analytical biochemical technique of the MBS9360743 kit is based on FDFT1 antibody-FDFT1 antigen interactions (immunosorbency) and an HRP colorimetric detection system to detect FDFT1 antigen targets in samples. The ELISA Kit is designed to detect native, not recombinant, FDFT1. Appropriate sample types may include undiluted body fluids and/or tissue homogenates, secretions. Quality control assays assessing reproducibility identified the intra-assay CV (%) and inter-assay CV(%).
Other Notes	Small volumes of FDFT1 elisa kit vial(s) may occasionally become entrapped in the seal of the product vial during shipment and storage. If necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the container`s cap. Certain products may require to ship with dry ice and additional dry ice fee may apply.
